

Qualitative research on environmental solutions for ports that reduce cost or increase income for the port community

Research aims :

1. To Find some mutual areas of the environment and economic contexts of the ports.
2. To give a package of solutions that help to improve both sides with a single solution.

Research objectives :

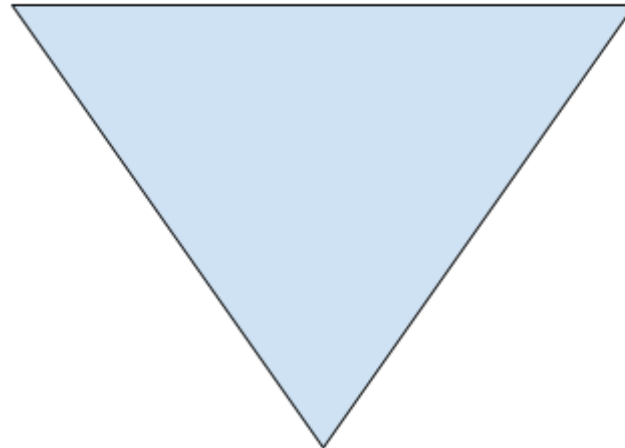

1. To Identify the strategies that have been used on each side to solve the challenges of that area(Economic and Environment)
2. To Compare and contrast the strategies.
3. To reach new solutions that consider both sides' benefits.

Research questions :

1. What are common Environmental and Economic problems and strategies that have been used for ports issues in those areas?
2. What are the similarities and differences of the issues and approaches?
3. What are new single solutions to consider the improvement of both contexts in ports?
