

Cooperation around Circular Economy

3.6 Million
m³ surplus
material from
major works in
vicinity

The Central Quay will be refilled on **circular economy** basis using the surplus material from two parallel major construction projects in the vicinity of the port.

The aim is to **avoid dredging the seabed** to fill the quay, thus avoiding the impact on marine biodiversity. The **seabed sand bank may be needed in the future by the community** to replenish coastal beaches, as sea levels will rise in the future due to climate change.

NATURE POSITIVE INFRASTRUCTURE

5 Offshore Wind XXL and Low-Zero Emission Multimodal Terminal (RO-RO, RO-PAX)

∞ Circular Economy (2nd phase backfilled with excavation material)
