Q & A

P

R T

OF BAKU

A single point interaction between businesses and authorities.

PORT OF BAKU - PMIS

What is PCS?

Why PCS?

- A PCS is an electronic platform that connects the multiple systems operated by a variety of organisations that make up a seaport community. It is shared in the sense that it is set up, organized and used by firms in the same sector – in this case, a port community.
- According to Valentin Carlan and Christa Sys, a PCS represents a tool through which port operations efficiency is expected to increase.

Benefits?

- Reduce paper (up to 90 %)
- Speed Up processes (up to 20 %)
- Increased data accuracy (up to 99.9%) for the exact cargo quantity and location within the terminal.
- Total control of freight flows
- Increased speed of freight turnover (up to 20%)
- Optimized use of the terminal's operation areas (up to 25 %)
- Improved service for freight owners by providing them with accurate cargo information including its current location.
- Decrease operating costs
- Increased speed and efficiency of data exchange between all freight processing parties at the terminal.
- Guaranteed real-time access to operational information.

The goals of PMIS in Port of Baku

Develop and Implement standards and protocols for processes and messages with the port community.

Systematically capture the relevant information from stakeholders. Avoiding the requirement to re-enter data limits errors and processing costs.

Centralize and standardize community information.

Provide transparency and real-time, or near real time, information to facilitate tracking and tracing of goods, and optimize transit times.

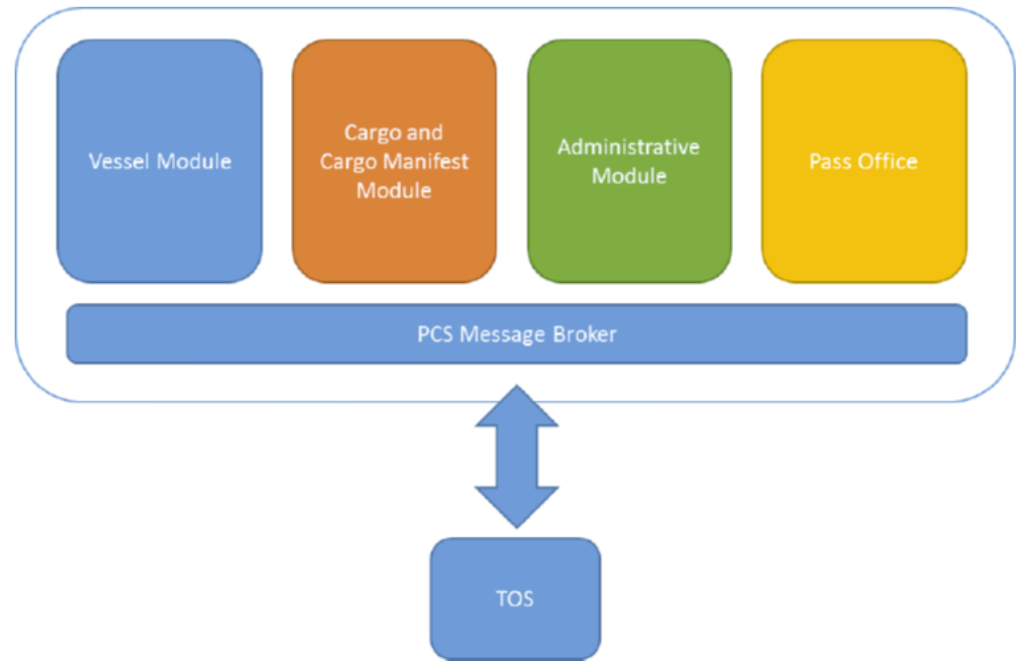

Building Blocks of PMIS

What does PMIS PoB contain?

PROJECT SCOPE

Port Community System

- ✓ Vessel Registration,
- ✓ Call and berth request,
- ✓ Cargo Declaration,
- ✓ Passenger List,
- ✓ Crew member List and
- ✓ Dangerous good on board

Port Community System – Vessel operation

Pre Arrival

- Vessel Announcement
- Import and export Manifest
- Vessel clearance
- Graphical berthing planning

Arrival

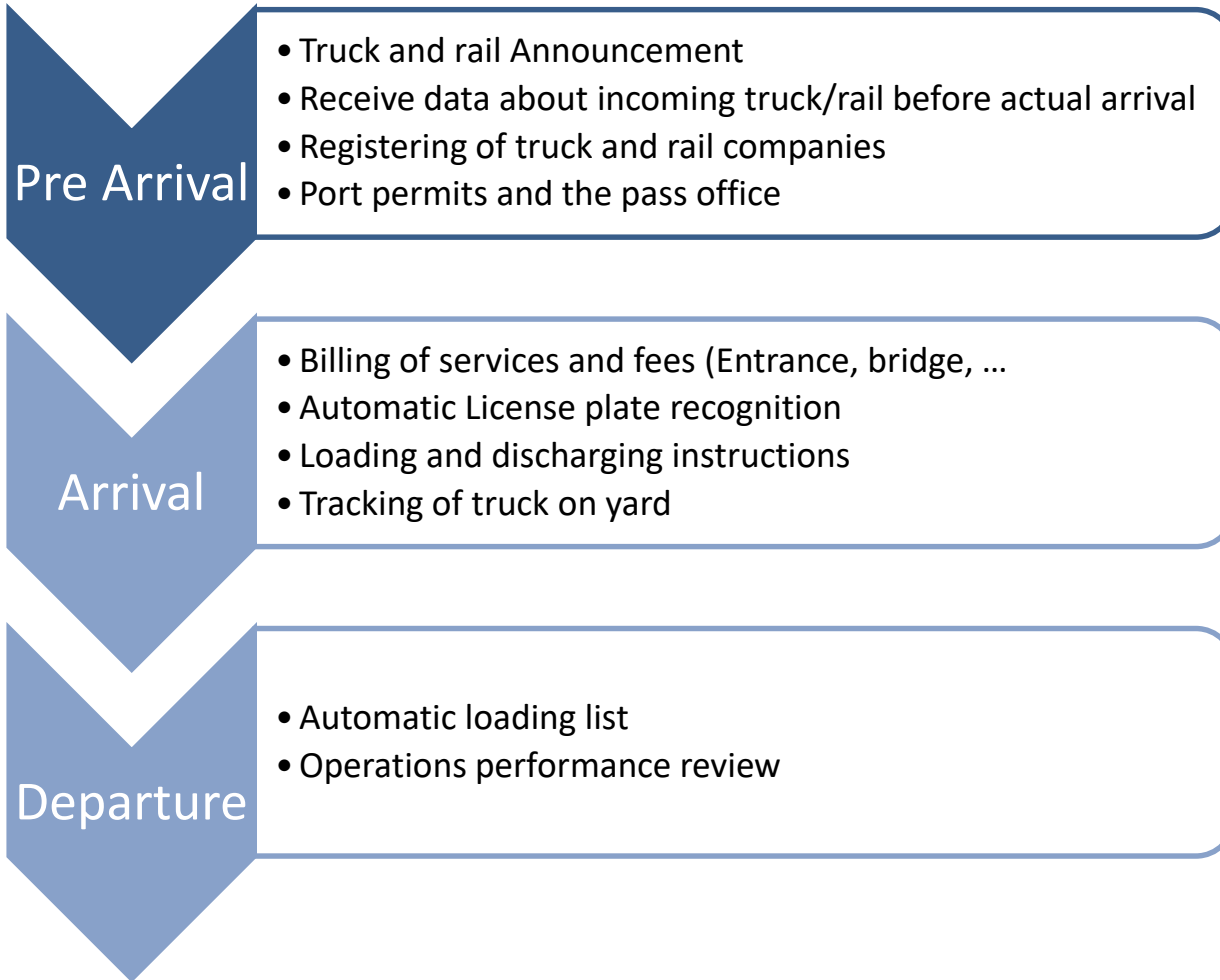

- Tug boat and pilots
- Vessel operations processes
- Commission check
- Loading and discharging instructions
- Mobile device support

Departure

- Clearance for departure
- Operations performance review

Port Community System – Land side

RORO – Terminal Operating System

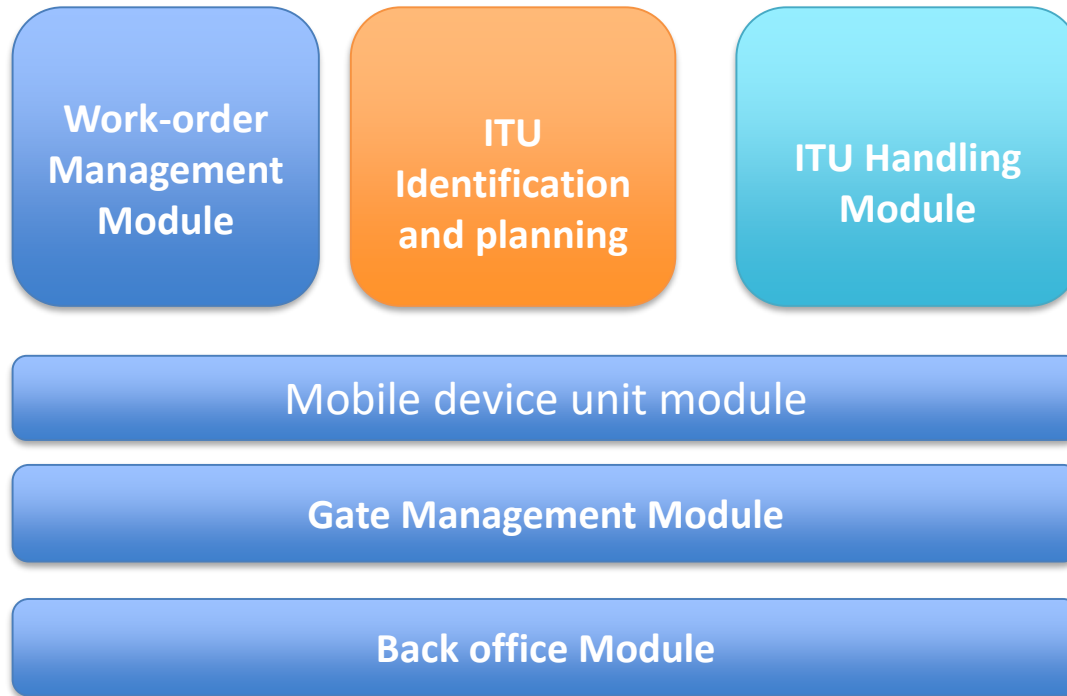

Operational Management of the RoRo Rail gate

Operational Management of the RoRo Vessel gate

Operational Management of the RoRo Road gate

Operational Management of the RoRo Yard

RORO – Terminal Operating System

Port Operations Control Center (POCC)

Vessel Module

- Vessel tracking and monitoring

- Vessel activity monitoring

- Berth management

Yard Module

- Crane activity monitoring

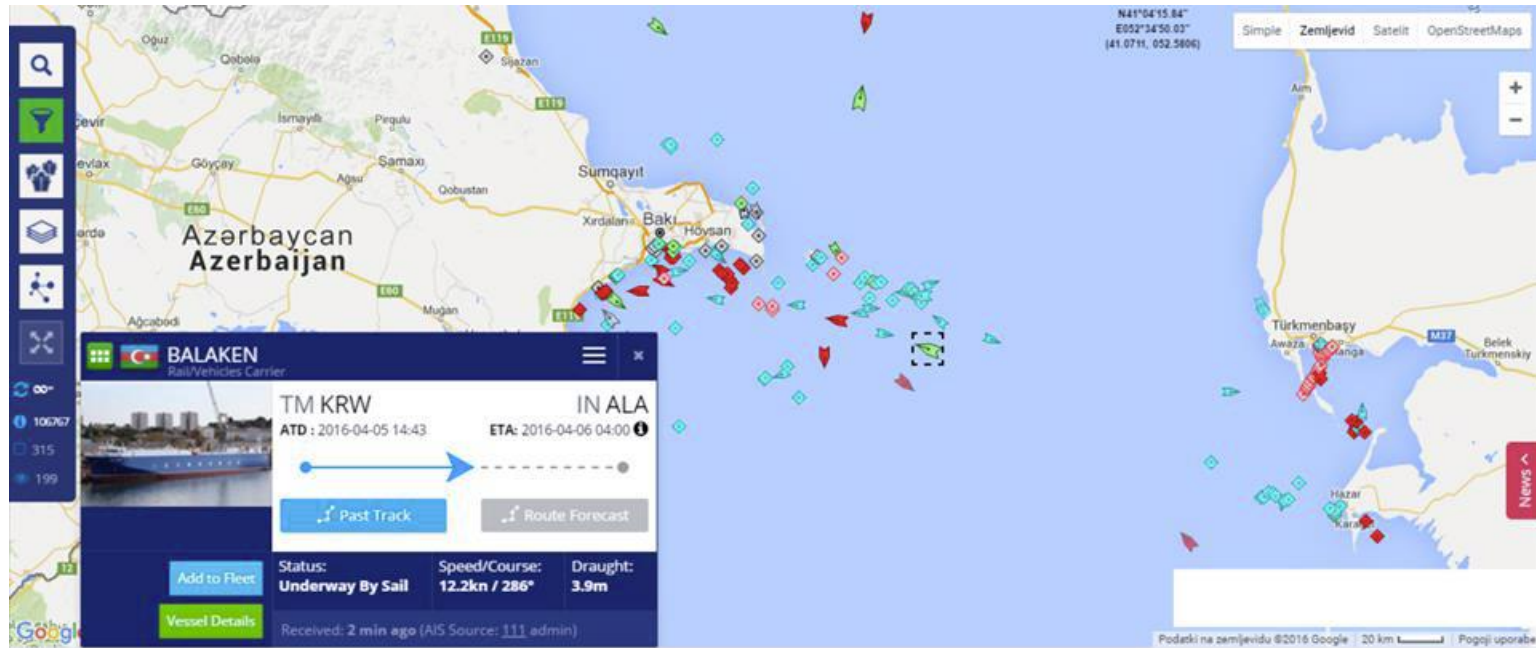

- Yard and cargo operation monitoring

Gate Module

- Train and train monitor

Environment monitoring

POCC - Examples

POCC - Examples
